Threadline

Follow what happened.

An audit trail library for Phoenix apps. Threadline records every insert, update and delete in your PostgreSQL database, so you can open any record's history and see what changed, who changed it and when.

COLOR

Stitch Blue #4781E6, the thread in the logo

Insert Update Delete Redacted

TYPE

Follow what happened.

Familjen Grotesk for the name and headlines, Geist for reading and tables, IBM Plex Mono for ids and code.

VOICE

A calm senior engineer walking you through what changed in your database, who changed it and when.

THREE RULES

1. The name is Threadline: one word, capital T. In code it is `threadline`.
2. Never run the thread through the word, and never put a shape behind the spool.
3. Insert, Update, Delete and Redacted are always written out. Their semantic colors back up the word; they never replace it.

An audit trail library for Phoenix apps. Threadline records every insert, update and delete in your PostgreSQL database, so you can open any record's history and see what changed, who changed it and when.

ELIXIR AND PHOENIX DEVELOPERS

Add an audit trail to my Phoenix app without rewriting it.

A setup that fits a normal Phoenix app: add `{:threadline, "~> 1.1.0"}`, run one migration that adds audit triggers to the tables they choose, and check which tables are audited.

SUPPORT AND ADMIN STAFF

See who changed a record, what they changed and when.

One place, Threadline Admin, to filter changes by database table, person or job, and date, open a record's full history and copy its id into a support ticket.

SECURITY AND COMPLIANCE REVIEWERS

Find out whether Threadline records the changes we need to audit, and how we can review and export them.

A plain account of what is recorded, which personal data is redacted or left out, how long audit history is kept and how to export it, and no claim Threadline can't back up.

Plain

Name what people look for: the database table, the record, what changed, who changed it and when. Not "evidence plane" or "posture".

Exact

Show the real id, the real timestamp and the real value. An audit trail that rounds a number up or down, or sums up a change, is not a true record.

Honest

Say what Threadline records and what it does not. Never "tamper-proof", "immutable" or "compliant".

Calm

People open Threadline Admin when something has gone wrong. Be steady and brief.

Yours

Audit history lives in the host app's own database, and the host app decides who can open Threadline Admin. Threadline's name and logo are never shown to the host app's customers.

ELEVATOR PITCH

Threadline is an audit trail library for Phoenix apps. It records every insert, update and delete in your PostgreSQL database, with who made each change and when, and adds Threadline Admin, where your team can follow what happened.

KEY MESSAGES

Every change, in order.

A PostgreSQL trigger on each audited table records every insert, update and delete in the same transaction that saves it.

Any record's history.

Open any record to see every change ever made to it, or see the record as it was at any point in the past.

Your database, your access.

Audit history is stored in your own PostgreSQL database. Threadline Admin runs inside your app, and you decide who can open it and how they sign in.

TAGLINE

Follow what happened.

Sentence case, with the period. It sits beside the logo, never in it.

ABOUT THREADLINE: APPROVED DESCRIPTIONS

`One line: Hex, GitHub and package listings`

An audit trail library for Phoenix that records every row change in PostgreSQL, so you can follow what happened.

`Short: README opening, talk bios`

Threadline is an open-source audit trail library for Elixir and Phoenix apps. It records each insert, update and delete in PostgreSQL, with who made it and when, and includes Threadline Admin, where your team can look up a record and see every change made to it, who made it and when.

`Do not say`

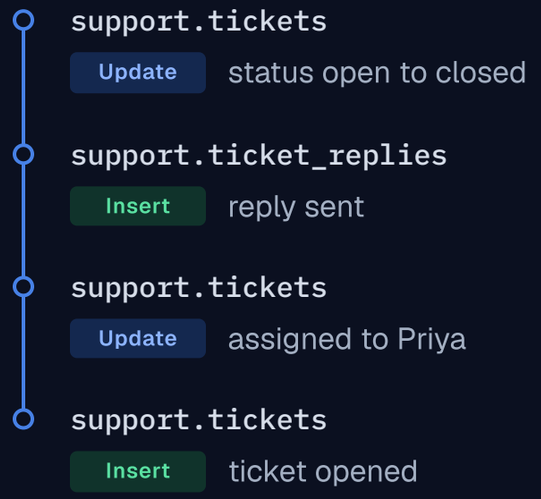

Tamper-proof, immutable, compliant, certified, “audit log”, “powerful”, “seamless”, “next-generation”. Threadline records changes; whether that meets a regulation is for your team to decide.

Why a spool of thread

By default, a database keeps only a record’s current values. It doesn’t remember what a value was before, or who changed it. Threadline puts every change on one timeline, in order, each tied to its actor: a person, or a part of your system such as a background job.

The mark is a spool with its loose end running free. The wound thread is the history already recorded; the loose end is where you start pulling. The name is the instruction: follow the line.

The spool is built from a few plain parts: a round disc at each end (the flanges) in Ink, a barrel between them, and the Stitch Blue thread wound on it. Nothing in it is a lock, a shield or an eye. Threadline helps people find what happened; it does not guard or watch.

An audit trail is one thread. You pull it to follow what happened.

Full brand on Threadline's own sites and packages. A quiet guest in your app.

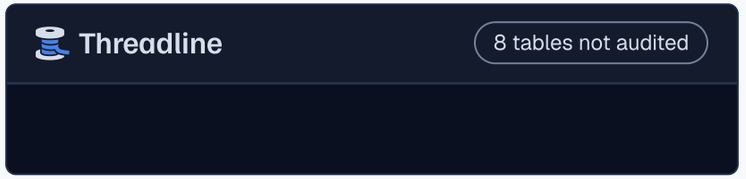

THREADLINE'S OWN

README, Hex page, docs site, social card

Everyone who is deciding whether to use it.

What shows. The full lockup, Stitch Blue thread, both themes, code colors.

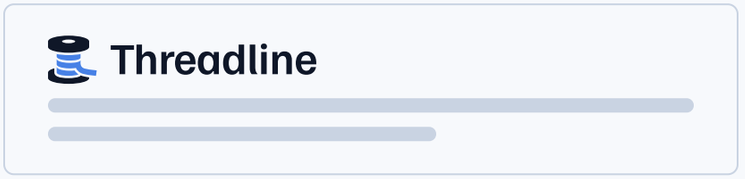

INSIDE THE HOST APP

Threadline Admin, at a path or subdomain the host app chooses

Support and admin staff, inside the host app.

What shows. The lockup in the top bar, the semantic colors of Insert, Update, Delete and Redacted, and the type. A host app may replace the lockup with its own name and logo.

IN OTHER PEOPLE'S WRITING

Blog posts, talks, newsletters, other READMEs

People writing about Threadline.

What shows. The lockup, unchanged, with the rules in this book. Nothing added.

The host app's customers never see Threadline: it is for the host app's own team. The host app chooses where Threadline Admin runs and who can open it, and may put its own name and logo in the top bar in place of Threadline's.

Threadline

Threadline

One color. Fog on Threadline Black. One color is the same drawing in a single color: the gaps between the end discs, the turns and the loose thread carry the form, so nothing is redrawn. Ink on light, Fog on dark.

Mark. The spool alone, for favicons and stickers. Where the name needs to show, use the lockup version instead.

Drawn for small sizes. Below 64 px the spool has its own simpler drawing: fewer turns of thread and wider gaps, so it still reads at small sizes, such as in a browser tab. The 16 and 32 px favicons use that simpler drawing, placed so its main edges land on whole pixels and its curves stay smooth. Below 16 px, do not use the mark.

Dark is the default theme. The logo has a version for each theme. On light, the spool's end discs and the word are Ink; on dark, they are Fog. The thread is Stitch Blue on both. Use the version made for the background; do not make one by inverting the colors of the other. The spool and the word are one lockup. Do not rearrange them, resize one against the other or place the spool anywhere but at the left of the word.

Threadline

Threadline

One color. Ink on Paper. One color is the same drawing in a single color: the gaps between the end discs, the turns and the loose thread carry the form, so nothing is redrawn. Ink on light, Fog on dark.

Mark. The spool alone, for favicons and stickers. Where the name needs to show, use the lockup version instead.

Drawn for small sizes. Below 64 px the spool has its own simpler drawing: fewer turns of thread and wider gaps, so it still reads at small sizes, such as in a browser tab. The 16 and 32 px favicons use that simpler drawing, placed so its main edges land on whole pixels and its curves stay smooth. Below 16 px, do not use the mark.

Light is a full theme. The logo has a version for each theme. On light, the spool's end discs and the word are Ink; on dark, they are Fog. The thread is Stitch Blue on both. Use the version made for the background; do not make one by inverting the colors of the other. The spool and the word are one lockup. Do not rearrange them, resize one against the other or place the spool anywhere but at the left of the word.

The 32 px icon, enlarged 8 times

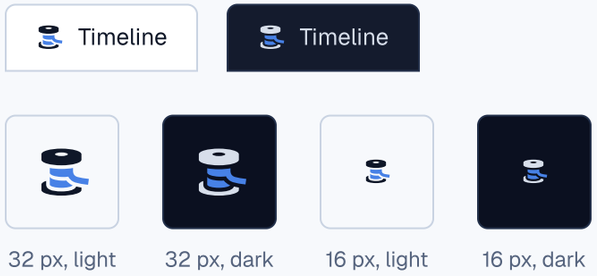

The 16 px icon, enlarged 16 times

A simpler spool for small sizes.

Below 64 px the spool has its own simpler drawing: fewer turns of thread and wider gaps, so it still reads at small sizes, such as in a browser tab. The 16 and 32 px favicons use that simpler drawing, placed so its main edges land on whole pixels and its curves stay smooth. Below 16 px, do not use the mark.

The browser tab follows the theme: `favicon.svg` draws the spool in Ink on a light device and in Fog on a dark one. The `.ico` is the light drawing only, because an ICO can’t change with the theme.

32 px, light

32 px, dark

16 px, light

16 px, dark

Keep clear space on every side equal to a quarter of the lockup's height, measured from the outermost edge of the lockup. Nothing enters it: no text, edge or other logo. The square is that quarter.

ON SCREENSHOTS AND PHOTOGRAPHS

- Place the lockup on a calm area at least as wide as the lockup and its clear space.
- Use the light drawing on a light area and the dark drawing on a dark one. If neither reads well, move the logo.
- Do not put a shape or a shadow behind it to make it read.

MINIMUM SIZE

	SCREEN	PRINT	ACTUAL SIZE
Lockup	96 px wide	25 mm wide	**Threadline**
Mark, drawn for its size	16 px	Not specified	

On screen, the lockup is never narrower than 96 px and the mark never smaller than 16 px. In print, never narrower than 25 mm.

RETIRED

The arch mark is retired. It was an earlier attempt at a Threadline logo: an arc over a bar, and an arc between the d and the l in the wordmark. This edition replaces it with the spool, so do not use it. It read as a padlock shackle, a magnet or a staple, which is the wrong promise for an audit trail library.

✕ Don’t stretch, squeeze or rotate the lockup.

✕ Don’t recolor the thread or the word, or use Thread Blue for the thread.

✕ Don’t put a tile, badge or any other shape behind the spool.

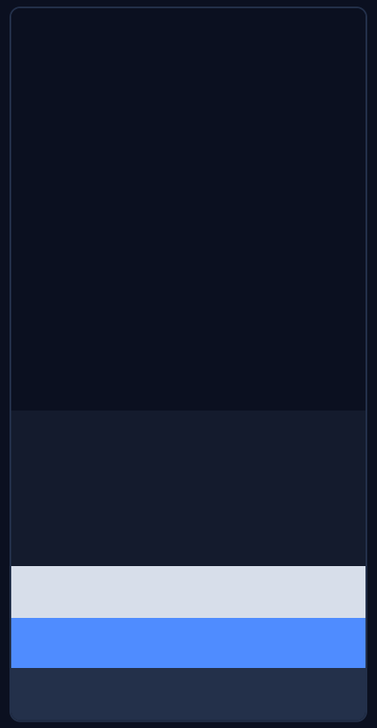

✕ Don’t add the tagline, the descriptor or any text to the lockup.

✕ Don’t run a line through the word, or draw the thread through the letters.

✕ Don’t use the dark drawing on a light page, or the light drawing on a dark one.

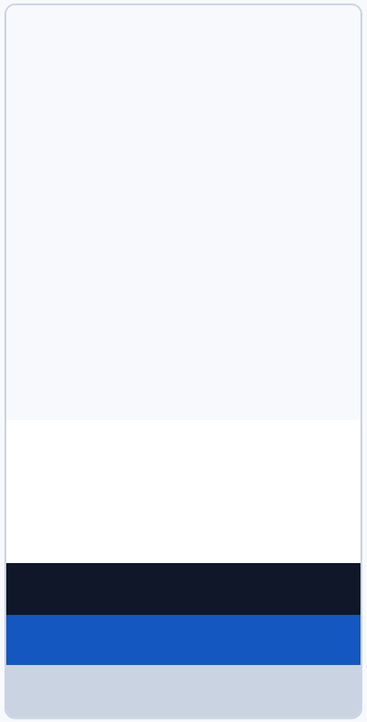

Threadline Black	#0B1020	RGB 11 16 32	The default background. Dark is the default theme.	About 62% of a dark screen.
Graphite	#141B2D	RGB 20 27 45	Rows, cards and panels on Threadline Black.	About 24% of a dark screen.
Fog	#D7DEEA	RGB 215 222 234	Text on dark, and the lockup on dark.	About 8% of a dark screen.
Thread Blue	#4F8CFF	RGB 79 140 255	Links, focus rings, selection and the main button on dark.	About 3% of a dark screen.
Slate Line	#23304A	RGB 35 48 74	Dividing lines on dark.	About 3% of a dark screen.

Stitch Blue
#4781E6 RGB 71 129 230
The thread in the logo, on light and on dark. Never for text, links or controls: Thread Blue and Thread Blue Deep do that work.

Steel Lift
#A3AFC2
Secondary text on Threadline Black and Graphite.

Steel
#73819C
Input and button borders on dark (4.4:1 on Graphite).

Paper	#F7F9FC	RGB 247 249 252	The light background.	About 64% of a light screen.
Card White	#FFFFFF	RGB 255 255 255	Rows, cards and panels on Paper.	About 22% of a light screen.
Ink	#0F1728	RGB 15 23 40	Text on light, and the lockup on light.	About 8% of a light screen.
Thread Blue Deep	#1557C0	RGB 21 87 192	Links, focus rings, selection and the main button on light.	About 3% of a light screen.
Hairline	#C9D3E2	RGB 201 211 226	Dividing lines on light.	About 3% of a light screen.

Stitch Blue

#4781E6 RGB 71 129 230

The thread in the logo, on light and on dark. Never for text, links or controls: Thread Blue and Thread Blue Deep do that work.

Slate Text

#56647E

Secondary text on Paper and Card White.

Control Edge

#76849F

Input and button borders on light (3.6:1 on Paper). Dark uses Steel at #73819C.

SEMANTIC COLORS

Each kind of change has its own color.

Insert, Update, Delete and Redacted are always written out. Their semantic colors back up the word; they never replace it.

ON LIGHT		ON DARK	
Insert	#136C47 on #DDF2E8	Insert	#5AE0A2 on #10332B
Update	#1557C0 on #DDE9FB	Update	#8DB4FF on #14284F
Delete	#A33434 on #F9E1E1	Delete	#FF8585 on #3A1B23
Redacted	#8A5512 on #FBEFD2	Redacted	#F6C86B on #3A2A0A

Insert, Update and Delete are the three kinds of change. Redacted marks a value that was replaced before it was stored. In a timeline, the colored word is how a long list is scanned. The word always says what happened.

ACCENT COLORS

Accents are not semantic colors. They don’t mean insert, update, delete or redacted. Each one points at one kind of thing, so the eye can find it.

Signal Cyan

Light #0B6F67 Dark #4EDFD1

The correlation id: one id shared by every change made in the same request or background job.

```
Actor  user/cb1b4a0f…5895ee5b  Correlation  walk-acme-4521-close
```

Iris

Light #5B49D6 Dark #8A7CFF

Keywords in code and the selected saved view in a list of changes. Never a status.

```
def close(ticket) do   Saved view: Last 7 days
```

Use an accent only for the thing it marks, never as decoration, so it keeps its meaning.

ROLE	WHERE IT IS USED	LIGHT		DARK		MINIMUM
Body text	README, docs, Threadline Admin and this book.	Aa	16.97:1	Aa	14.00:1	4.5:1
Descriptor and secondary text	The words “audit trail library” beside the logo, and metadata under a title.	Aa	5.66:1	Aa	8.54:1	4.5:1
Caption and table metadata	Captions, timestamps and column labels on a card or row.	Aa	5.97:1	Aa	7.73:1	4.5:1
Copy inside an application	Text on a card in Threadline Admin, the README or a slide.	Aa	17.90:1	Aa	12.68:1	4.5:1
Display accent	A large headline word or figure in the accent. 24 px and up.	Aa	6.31:1	Aa	5.89:1	3:1
Link	Links in running text and the main button’s edge.	Aa	6.65:1	Aa	5.33:1	4.5:1
Focus ring	The 2 px ring on a focused control.		6.31:1		5.89:1	3:1
Logo thread	Stitch Blue against the page, read as a shape, not as text.		3.59:1		5.00:1	3:1

ABOUT THESE RATIOS

Ratios are WCAG 2.2 contrast, computed from the hex values. A pair that passes here says nothing about a whole product built with it. Stitch Blue on Paper is 3.6:1: enough for a shape, not for text. Hairline and Slate Line only divide space and are never used for text.

NEVER

- × **Stitch Blue** as text of any size on Paper or Card White
- × **Slate Line** as the only boundary of a control
- × **Thread Blue** as text on Paper or Card White (use Thread Blue Deep)
- × **Thread Blue Deep** as text on Threadline Black (use Thread Blue)

	Familjen Grotesk	Geist	IBM Plex Mono
	Aa	Aa	Aa
	Follow what happened.	Every insert, update and delete is recorded with who made it and when.	`user/cb1b4a0f-9d3e-4c7a-8f21-5c5a6895ee5b`
WEIGHTS	SemiBold (600) for the name and headlines; Regular (400) never for display.	Regular (400), Medium (500) and SemiBold (600).	Regular (400) and Medium (500).
USE	The wordmark, headlines in books, slides and social cards, and page titles in docs.	Body text, Threadline Admin, tables, buttons and labels.	Anything copied or compared: ids, database table and field names, commands and code.
WHY	The wordmark is outlined using this typeface, and headlines set in it match the logo. Narrow and plain, with flat shoulders, it reads as an engineering tool.	Chosen for dense audit tables: tabular numerals so timestamps and counts align, and plain letterforms that hold at 13 px. Threadline Admin already uses it.	Every character is distinct (0 and O, 1 and l), narrow enough to fit a UUID in a table column. It is the monospace face Threadline Admin already uses.

All three families are SIL Open Font License 1.1, from Google Fonts. The license texts are in the assets fonts folder.

ROLE	USE	FACE, WEIGHT, SIZE	SAMPLE
Display	Covers, slides and social cards. One line, two at most.	Familjen Grotesk 600 56 px / 1.05 tracking -0.015em	Follow what happened.
Heading	Page titles and section heads in docs and Threadline Admin.	Familjen Grotesk 600 28 px / 1.2 tracking -0.01em	Open a record’s history
Body	README, docs and paragraphs in Threadline Admin. 62 to 72 characters a line.	Geist 400 16 px / 1.55 tracking 0	Every insert, update and delete is recorded with who made it and when.
Dense text	Lists of changes in Threadline Admin. Always with tabular numerals.	Geist 400 13 px / 1.4 tracking 0	Today, 7:08 PM UTC
Label	Navigation groups and column heads. Capitals only at this size and weight.	Geist 600 12 px / 1.2 tracking 0.12em, capitals	INVESTIGATE
Code and ids	Ids, table and field names, commands. Don’t wrap an id: shorten it in the middle. Clicking it copies the whole id.	IBM Plex Mono 400 13 px / 1.5 tracking 0	`user/cb1b4a0f-9d3e-4c7a-8f21-5c5a6895ee5b`

TIME	DATABASE TABLE	OPERATION	ACTOR	RECORD	FIELDS CHANGED

Yesterday, 4:12 PM UTC	posts	Delete	unknown	9a62c0de…71b8	9
May 24, 12:00 PM UTC	users	Update	user/0d7f3a58…c2e1	55b0e9f4…0a1d	7

13 px Geist with tabular numerals; ids and names in 13 px IBM Plex Mono. The field counts line up by digit.

WHY IDS USE IBM PLEX MONO

	Zero and capital O	One, lowercase L and capital I
IBM Plex Mono	0 O	1 l I
Geist	0 O	1 l I

In IBM Plex Mono the zero has a dot, the l a curved foot and a bar at the top, and the I a bar at top and bottom, so an id can be read and copied correctly. Geist's zero has no dot and is close to the O, so ids are set in IBM Plex Mono.

MADE FOR TABLES PEOPLE READ CLOSELY

- Figures in a column use tabular numerals (`font-variant-numeric: tabular-nums`) so digits stack.
- Every id, table name and field name is set in IBM Plex Mono, so it can be compared by eye.
- Shorten a long id in the middle, never at the end. Clicking an id copies the whole id and shows a short "Copied to clipboard" message; the id itself never moves or changes.
- Headlines are sentence case. Capitals appear only in 12 px labels.
- No type is lighter than 400 or smaller than 12 px.

A calm senior engineer walking you through what changed in your database, who changed it and when.

	PLAIN — LIVELY	SOUNDS LIKE
Threadline Admin: errors and empty states	● ○ ○ ○ ○	No changes match these filters. Try a wider date range or clear a filter.
Docs and README	○ ● ○ ○ ○	Add audit triggers to the tables you choose, run the migration, then check which tables are audited.
Release notes	○ ● ○ ○ ○	A record’s history can now show the record as it was at any point in the past.
Talks and social posts	○ ○ ● ○ ○	Somebody changed that record on Tuesday. Here is how to find out who.

The voice never changes; the tone shifts with where the words appear. Threadline stays plain everywhere and gets only a little looser in a talk or a post. It is never loose where something has gone wrong, because people open Threadline Admin when they need an answer.

Open a record’s history.

Not: Leverage our powerful audit platform.

See who changed this record, and when.

Not: Gain visibility into user activity.

Threadline records every change to the tables you choose.

Not: Threadline makes your data tamper-proof.

Redacted: the value was replaced with [REDACTED].

Not: The value is obfuscated for compliance.

Check which tables are audited.

Not: Verify your audit posture.

Delete history older than your retention period.

Not: Purge your audit log.

No changes match these filters. Try a wider date range.

Not: Oops! We couldn’t find anything.

Export this record’s history as JSON.

Not: Generate your compliance evidence pack.

WRITE FOR THE PEOPLE READING

- **Write for support staff who don’t read code.** Name the database table, who made the change and when, before any id.
- **Say what they can do next.** Every empty and error state ends with a next step.
- **Spell out the time zone.** Write “7:08 PM UTC”, never a bare time.

Threadline

Threadline, one word with a capital T, in running text. In code, packages and commands it is `threadline`, `:threadline` and `mix threadline.install`.

NOT LIKE THIS

~~ThreadLine, Thread Line~~: one word, one capital

~~THREADLINE~~: except as a 12 px label in capitals

~~threadline~~: in running text (code only)

~~the Threadline platform~~: Threadline is a library

DESCRIBING IT

Call it an “audit trail library”. Call what people read “history”.

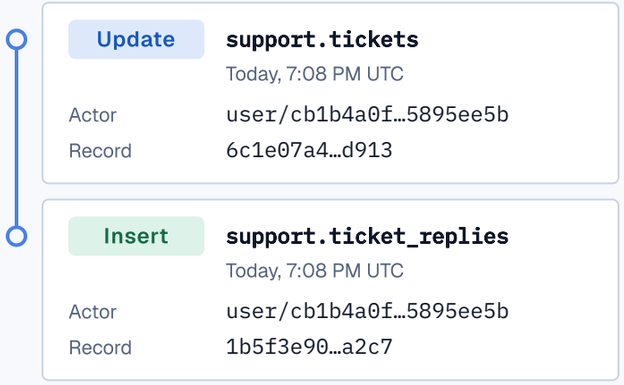

The words Threadline depends on.

TERM	WHAT IT MEANS HERE	INSTEAD OF
Audit trail	The category: the recorded history of changes. “Log” suggests text logs.	~~audit log~~
History	What you read in Threadline Admin: every change to a record, in order.	~~evidence~~, ~~proof~~
Record	One row in a database table, such as one support ticket. Say “row” only in SQL terms.	~~entity~~, ~~object~~
Change	One insert, update or delete of one record.	~~event~~, ~~activity~~
Transaction	The changes your app saved together, in one database transaction.	~~audit transaction~~
Action	What your app says it did, such as `ticket_replied_and_closed`.	~~intent~~
Actor	Who made the change: a person, a service account or a job.	~~principal~~, ~~actor ref~~
Redacted	A value replaced with `[REDACTED]` before it is stored. A field left out is not recorded at all.	~~masked~~, ~~obfuscated~~, ~~scrubbed~~
Audited table	A database table with a Threadline trigger, so its changes are recorded.	~~covered~~, ~~coverage~~, ~~posture~~, ~~drift~~
Retention period	How long audit history is kept before it is deleted.	~~purge~~, ~~prune~~
Host app	The Phoenix app that uses Threadline. Its database holds the audit history.	~~reader~~, ~~consumer~~, ~~parent app~~
Threadline Admin	The admin UI Threadline adds to the host app, at a path it chooses.	~~operator surface~~, ~~the /audit pages~~

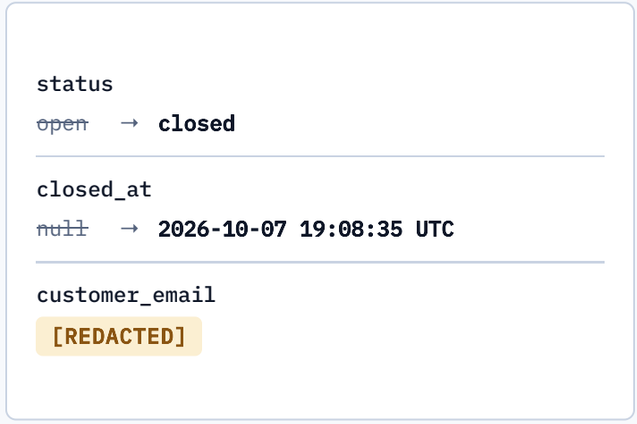

These are only the words the brand depends on; the product docs define the rest.

Show the real thing.

Threadline's pictures show the product at work, with its real labels: a timeline of changes, one record's history and a command. They need no stock photography.

A timeline of changes. Each change shows the operation word, the database table, the time, who made it and the record id.

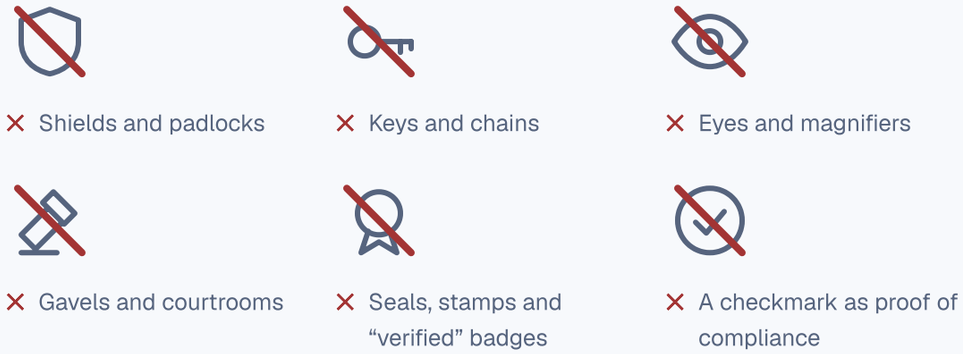

One record's history and a redacted value. The new value beside the old one, field by field.

```
$ mix threadline.gen.triggers --tables posts
$ mix ecto.migrate
$ mix threadline.verify_coverage
```

A command. A real command with its flags, in IBM Plex Mono on the code background.

The product pictures in this book are illustrations drawn from the product's real labels and structure. They show the layout this book recommends, not screenshots of the current product, and the data in them is invented.

NEVER

Also never: fingerprints, police tape, server racks and node clouds, stock people at screens, neon grids and glowing data.

Threadline helps people find what happened. These pictures say it guards, watches or certifies, and Threadline does none of those.

Quiet code colors that never look like a status.

ROLE	LIGHT	DARK	COLORS
Text	#0F1728	#D7DEEA	Names and punctuation. Module names in weight 600.
Comment	#56647E	#8F9DB5	Comments, in a quiet slate.
Keyword	#5B49D6	#8A7CFF	def, do, end, fn, SELECT. Iris.
String	#9C2F6B	#F0A6C8	A muted rose, kept apart from the status colors.
Atom, key and number	#1D4FA8	#8DB4FF	Atoms, keys, numbers and SQL names.
Command and flag	#0B6F67	#4EDFD1	The prompt, commands and flags, in Signal Cyan.
Code background	#EEF3FA	#080D1B	Behind every code block.

- No status colors in code: no green, amber or red, so nothing in code looks like an insert, a delete, a redacted value or a changed field.
- Module names and function heads stand out by weight (600), not by another color.
- Syntax colors are for code blocks only. Inline code in a sentence is plain IBM Plex Mono on a chip, in every medium.
- Use these colors where Threadline styles code: slides, social cards, blog posts and screenshots. GitHub and ExDoc color their own code; leave that alone.
- Show code that matches the current release, not pseudo-code.

```
# mix.exs
{:threadline, "~> 1.1.0"}

# when your app saves a change
opts = [audit_context: ctx, action: :post_created_via_api]
Threadline.Audit.transaction(Repo, opts, fn ->
  Repo.insert!(changeset)
end)
```

```
$ mix threadline.gen.triggers --tables posts
$ mix ecto.migrate
$ mix threadline.verify_coverage
```

```
SELECT table_name, captured_at
FROM audit_changes
WHERE table_name = 'posts'
ORDER BY captured_at DESC;
```

One line that connects things: the thread.

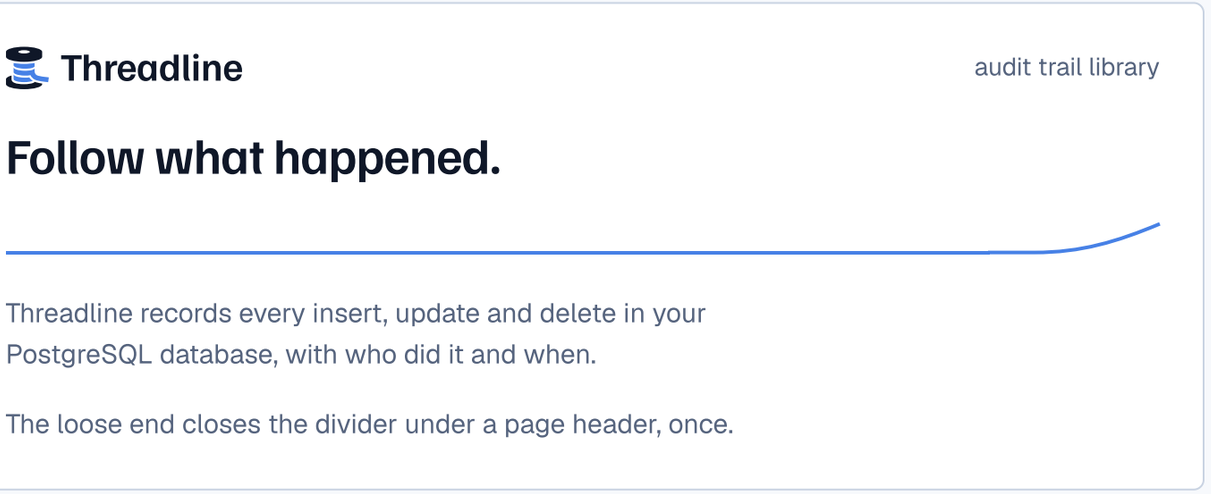

The thread is the brand’s only graphic device. It is a thin Stitch Blue line that links items in order, the way a history links changes. It is used sparingly, and only where it links one item to the next.

- **The thread line.** A 2 px Stitch Blue vertical line with a small knot at each item, and no curl at the end. It joins the changes in one record’s history, or the steps on a docs page. Entries start on one grid, so the words beside each operation line up.
- **The loose end.** The thread’s last stretch: the line lifts slightly and ends in a flat cut, as the logo’s thread does leaving the spool. It closes the divider under a page header or a banner, once.

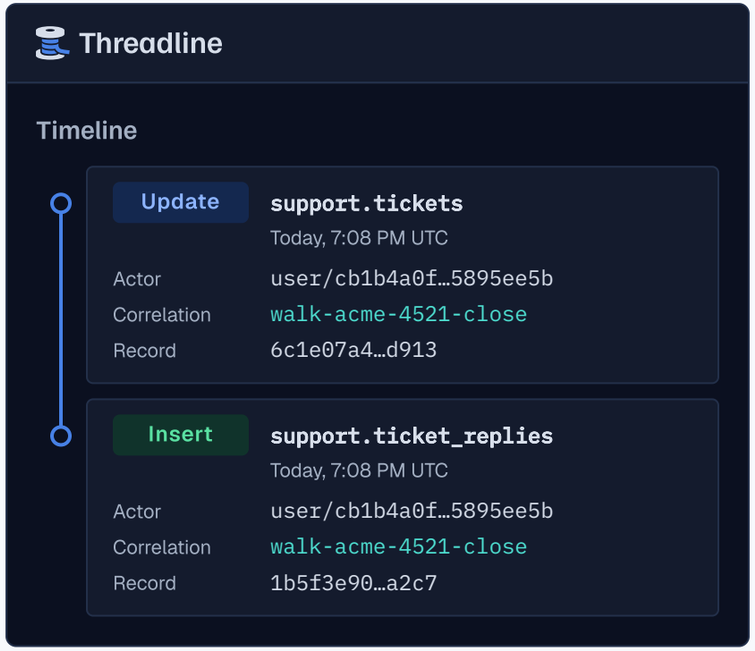

The thread never runs through text, never loops decoratively, never fills a background and never replaces the logo. One thread line per view.

The thread line joins the changes in one record’s history.

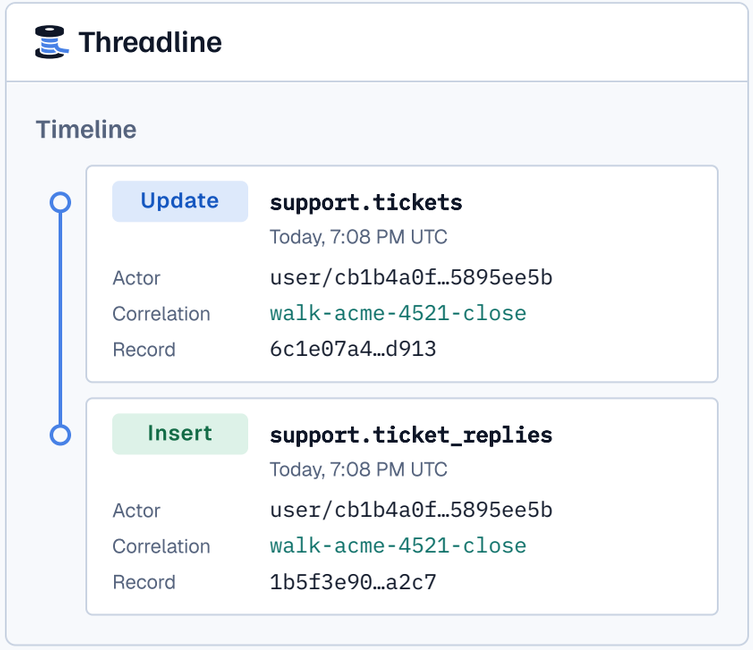

Dark is the default. Light is complete. System follows the device.

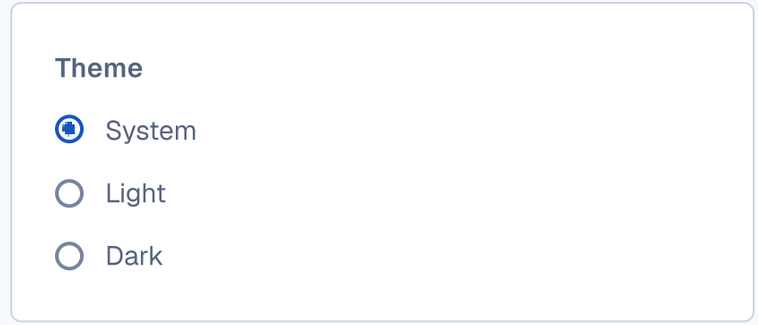

DARK, THE DEFAULT

Threadline Black behind Graphite rows, Fog text, Thread Blue links. The default for Threadline Admin and this book.

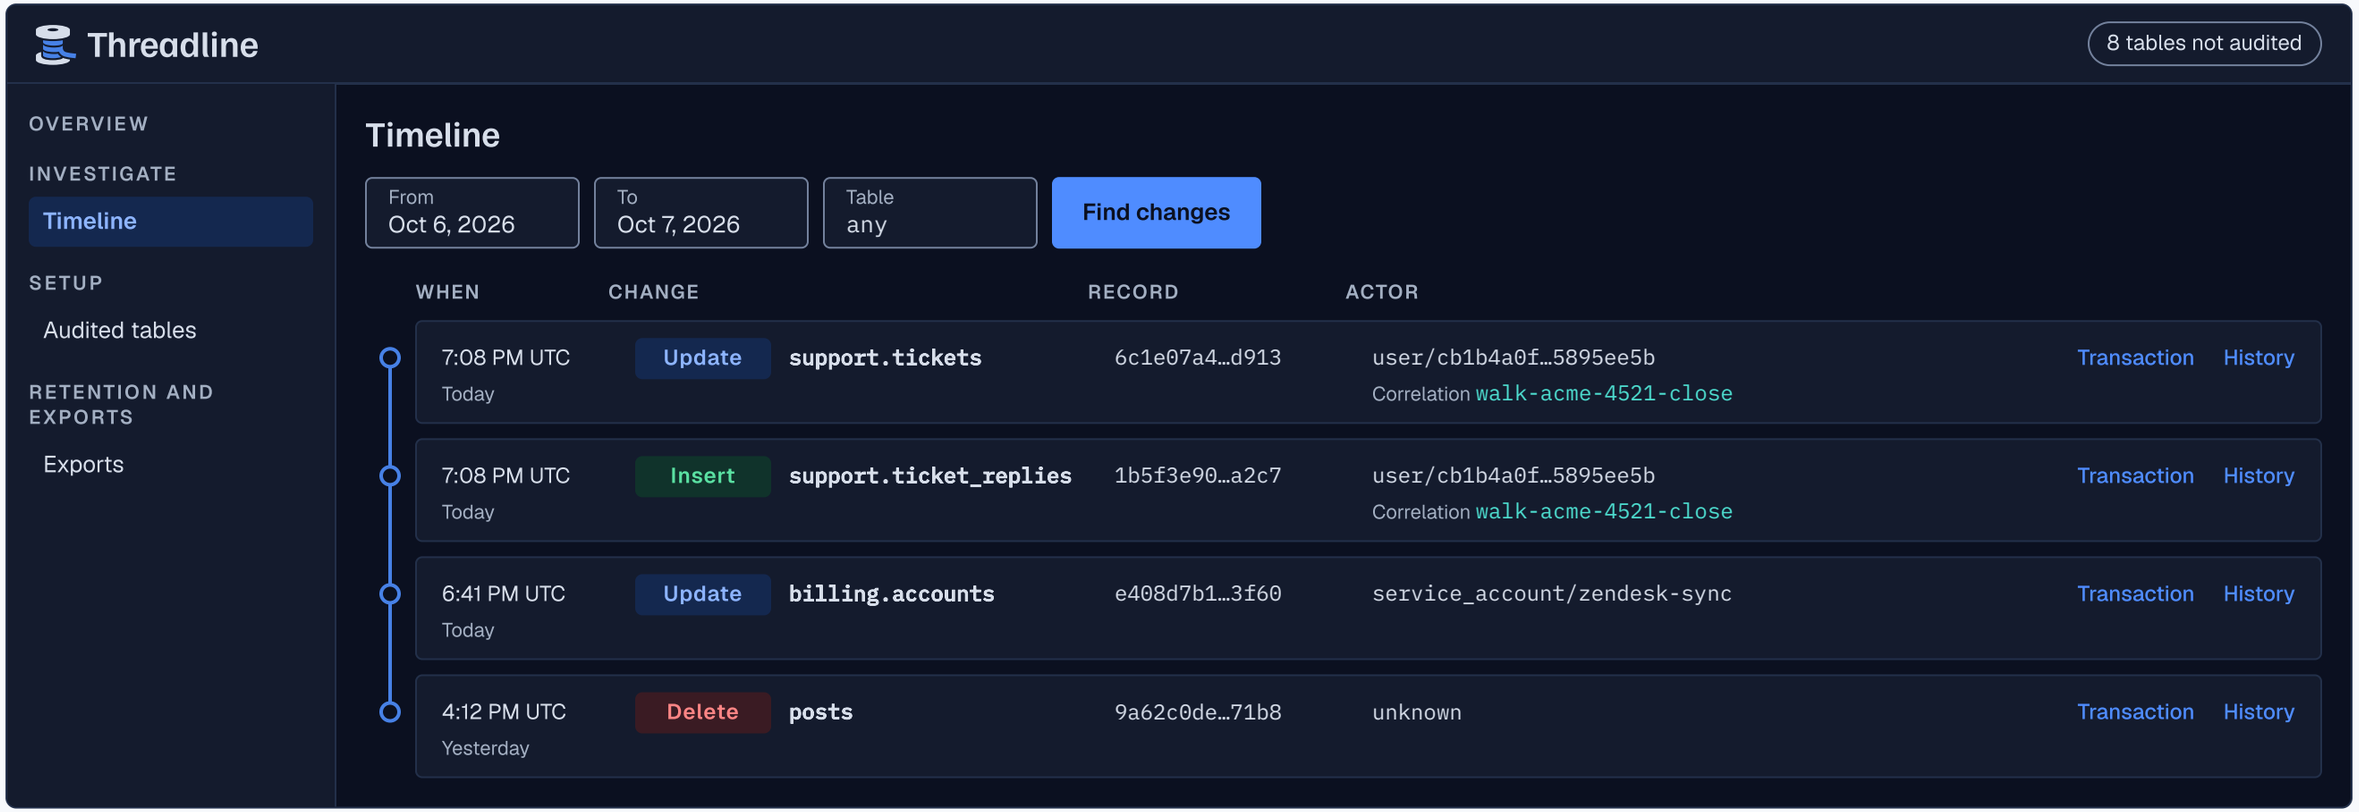

LIGHT

Paper behind Card White rows, Ink text, Thread Blue Deep links. Every text and background pair is contrast-checked.

SYSTEM

The page follows the device's setting from the moment it loads, and the logo uses the drawing for whichever theme is showing. Choosing a theme applies it at once, with no confirm button.

Threadline Admin's timeline, in dark. The lockup is in the top bar, and each change names its operation in a colored word. Ids are in IBM Plex Mono, shortened in the middle, and every time has its time zone. An illustration of the layout this book recommends, using the product's real labels.

WHAT CARRIES THE BRAND

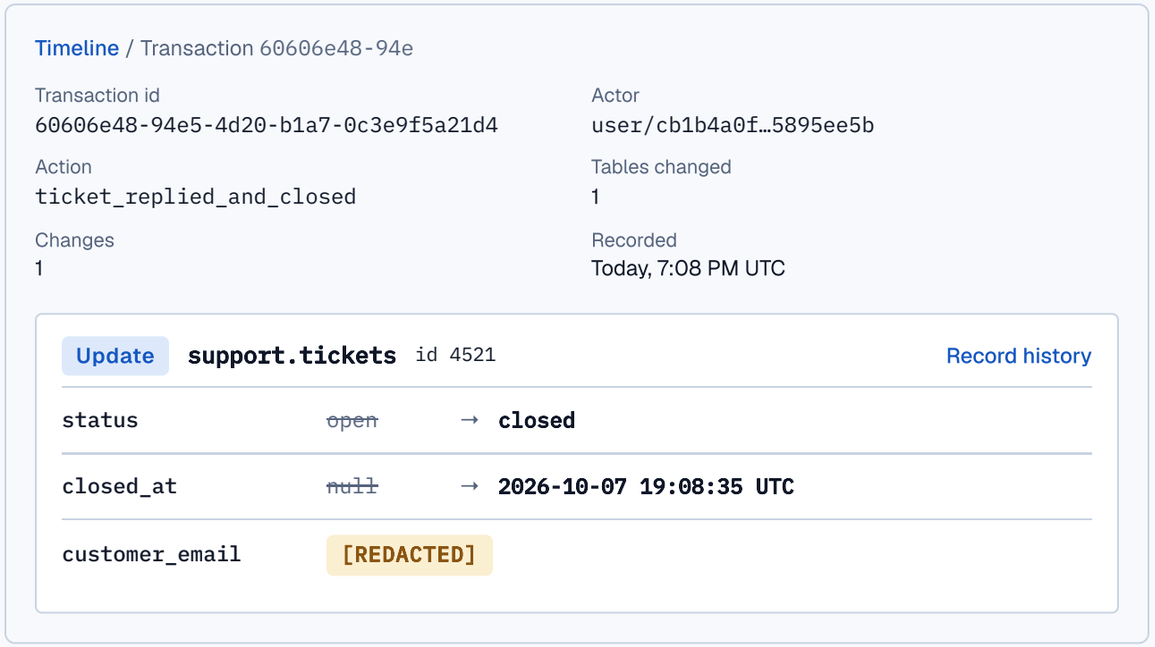

The lockup in the top bar, the operation words and their colors, and the type: Geist for reading, IBM Plex Mono for every id.

WHAT STAYS THE HOST APP'S

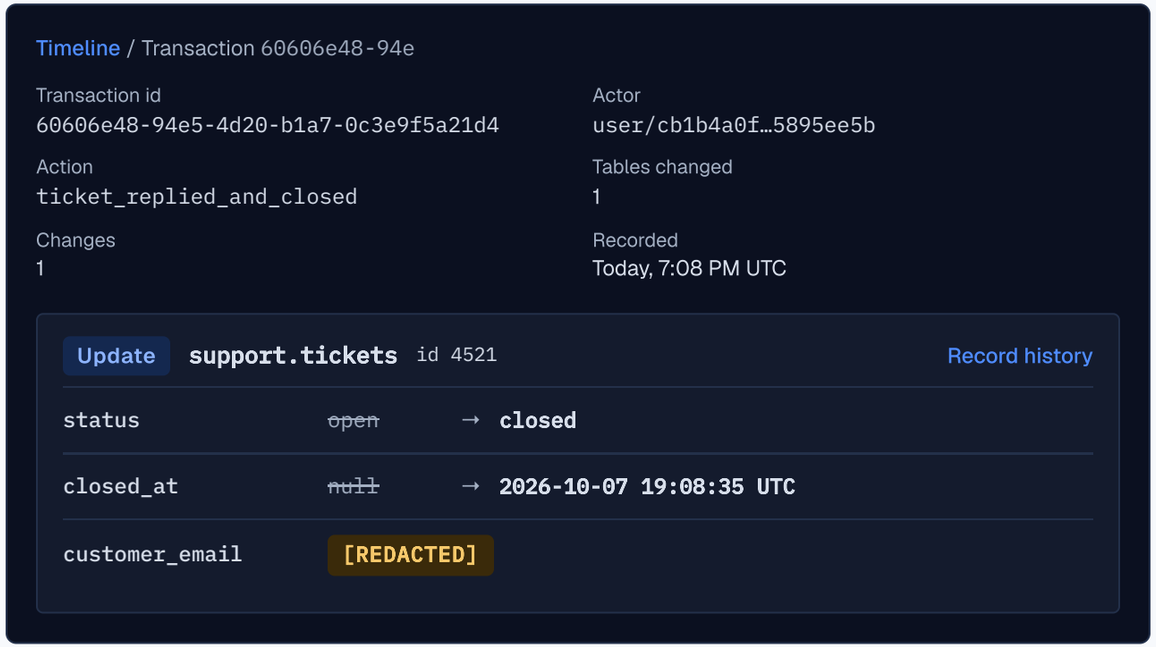

Where Threadline Admin runs (a path or subdomain), who can open it and how they sign in. A host app may put its own name and logo in the top bar instead of Threadline's.

WHAT NEVER CHANGES

The operation named in words, not only in color; a time zone on every time; ids in IBM Plex Mono that copy when clicked.

Light: what a support person sees. Each field shows the old value, muted and struck through, then the new value in the text color. A redacted value shows its chip, never a blank.

Dark: the same page. Words and ids are the same; only the colors change.

Threadline

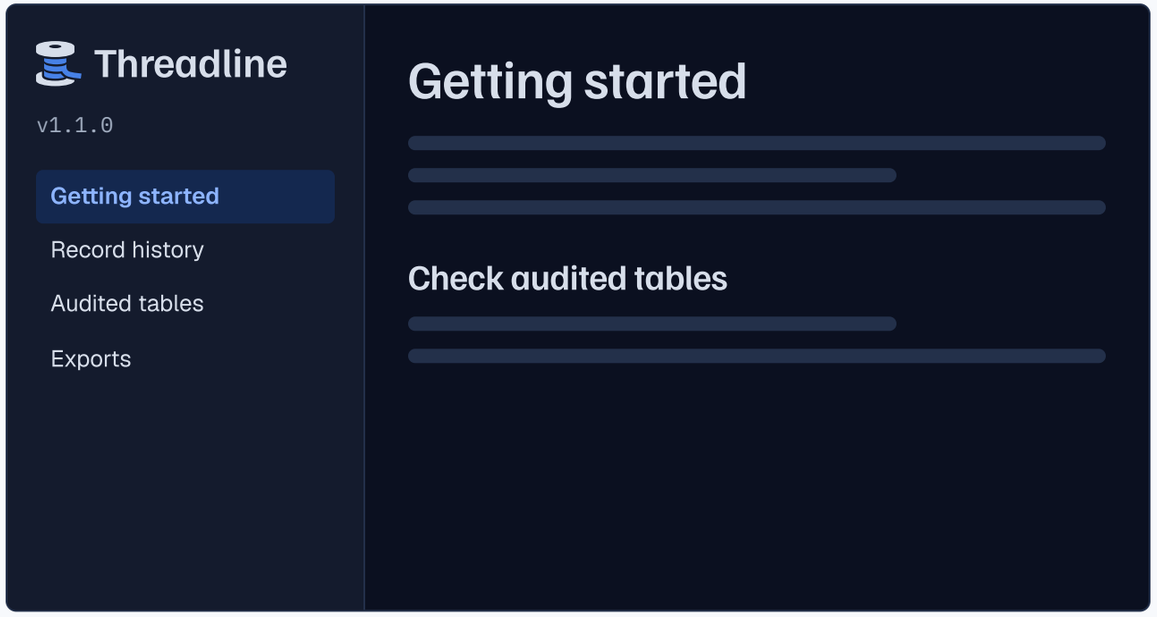

audit trail library

Follow what happened.

Threadline records every insert, update and delete in your PostgreSQL database, with who did it and when.

```
{:threadline, "~> 1.1.0"}
```

The README: the lockup on Paper, the descriptor and tagline as plain text under it, never inside it. The dark lockup goes in a `picture` element for GitHub's dark theme.

The docs site: the lockup in the sidebar (the docs generator's `logo` option). The generator keeps its own code colors; leave them alone.

PACKAGE LISTING

An audit trail library for Phoenix that records every row change in PostgreSQL, so you can follow what happened.

README FIRST SCREEN

The lockup, the descriptor, then the install snippet. No badges row above the lockup.

DOCS SITE

The lockup in the sidebar and the favicon in the tab. The generator's own colors for everything else.

The link preview, 1280 by 640 px: the one full-bleed dark canvas, because a preview has no page behind it. The headline sits beside the lockup, never in it.

```
$ mix threadline.verify_coverage
8 tables are not audited

  posts            audited
  comments         not audited
  support.tickets  audited
  billing.accounts not audited
  …

$ mix threadline.gen.triggers --tables comments
```

The terminal, in the code colors: the command and its flags in Signal Cyan, output in Fog. Output is plain words, with no status color. The output is illustrative.

LINK PREVIEW

One canvas, 1280 by 640: the lockup at left, the tagline set as a headline, the descriptor under it. No thread line, no screenshot.

TERMINAL AND SLIDES

The code colors, on the code background. The commands are ones Threadline really provides. The output is plain words, with no status colors.

NOT MADE YET

An avatar or an app icon, which needs an opaque square. The logo files have no background shape.

YOU NEED	USE (IN ASSETS/)
Logo on a light background	`logo/threadline-lockup-light.svg` `logo/threadline-mark-light.svg` `logo/threadline-lockup-light-2048.png`
Logo on a dark background	`logo/threadline-lockup-dark.svg` `logo/threadline-mark-dark.svg` `logo/threadline-lockup-dark-2048.png`
One color: print and single-color jobs	`logo/threadline-lockup-mono-ink.svg` `logo/threadline-lockup-mono-fog.svg` `logo/threadline-mark-mono-ink.svg` `logo/threadline-mark-mono-fog.svg`
Favicon and small sizes	`icon/favicon.svg` `icon/favicon-light.svg` `icon/favicon-dark.svg` `icon/favicon.ico` `icon/favicon-32-light.png` `icon/favicon-16-light.png`
Link preview and social card	`social/threadline-social-card-1280x640.png`
Fonts	`fonts/web/fonts.css` `fonts/variable/FamiljenGrotesk[wght].ttf` `fonts/variable/Geist[wght].ttf` `fonts/static/IBMPlexMono-Regular.ttf` `fonts/OFL-FamiljenGrotesk.txt`

RETIRED WITH VERSION 1.0

- The earlier arch mark and the arc between the d and the l, replaced by the spool.
- The tagline inside a lockup.
- The Thread Blue logo in the product: the logo thread is Stitch Blue.
- The words “audit platform”, “evidence plane”, “operator surface”, “audit log”, “masked” and “Find, Verify, Prove”.

Who to ask, and what's ours.

CONTACT AND APPROVAL

- Questions about the brand and requests to use it: the Threadline maintainers, through the project's issue tracker.
- Approval: the maintainers approve any use that changes the logo or colors; unchanged use under these rules needs no approval.

USE BY OTHERS

- Hex packages, blogs, newsletters and conference sites may use the lockup unchanged to refer to Threadline.
- Do not use it to suggest that Threadline endorses, certifies or audits another product.
- Do not alter the logo, or build a new logo that uses the spool.

LEGAL

- Threadline is released under the MIT license. The logo and this brand book are covered by the same license unless the repository says otherwise.
- No trademark registration is claimed in this book, and none was searched. Use ™, not ®, only if the maintainers decide to claim the name.
- Fonts are SIL Open Font License 1.1; their license texts ship in the assets folder.

REVISION HISTORY

Version 1.0, November 3, 2026. First edition of this brand book. The mark is a spool of thread, drawn from the name; the arch mark that came before it is retired. Adds a complete light theme, code colors, contrast pairs and the applications.

Mascot

Considered, not proposed. An audit trail library is trusted for being exact and calm, and a character pulls the other way.

Stock photography

There is no honest photograph of “what happened in a database”. Real product pictures say it better.

Brand-colored tables

In a dense table the data should carry the color. Rows stay on Graphite or Card White; color marks only the operation word.

Patterns and textures

The thread is the only graphic device. A pattern would compete with dense tables, where the data is the picture.

A second typeface for the logo

The wordmark and the headlines are both set in Familjen Grotesk, so no other display face is needed.

Logo animation and sound

Not defined in this edition. The brand has no motion or sound rules yet; see To review.

Choices made in this edition that are easy to change

1. **Terms are a working vocabulary.** Key terms (record, redacted, audited table, host app, Threadline Admin) are recommendations for the product's own words too. Tell the maintainers which to change.

2. **The logo blue is Stitch Blue everywhere.** The product draws its logo with the accent color. This book states the rule; the product's logo component would need to change.

3. **Light-theme values come from the product's light mode.** Thread Blue Deep, Card White and Hairline were read from the product at the time of writing. Slate Text is new in this book and was never in the product.

4. **No motion and no sound yet.** The logo has no animation and the brand has no sound. Both are possible next editions; neither is required to use this identity.

5. **An opaque square icon is not made.** GitHub organization avatars and some platform icons need an opaque square. The logo files have no background shape, so the choice is left open.

6. **How people sign in, and the Admin logo.** This book says the host app decides who can open Threadline Admin and how they sign in (its own login, single sign-on or a set username and password), and that a host app may replace the lockup with its own name and logo. The product lets the host app authorize access; it documents no logo setting, so that would need to be built.

7. **Threadline Admin is a new name.** The product calls its UI the operator surface and mounts it at `/audit` in its examples. This book names it Threadline Admin; the product would need to follow.

Not checked: Name and trademark clearance were not searched; the name was kept. Code samples follow the README and were not run. Logo legibility was checked on one test sheet, not with people. Contrast is computed for the pairs listed here, not for a whole product. Print color was not proofed.
